NE NOW

Imagine a better one. and make the connections that turn consistent customer experience fuels Amazon - and the re meet tomorrow's challenges today. We Reimagine Now.

Future manufacturing market requires speed, flexibility, quality, which yields obvious gaps across all industries

Increasing Product Complexity	Increasing Cost Pressure	Reduce Time to Market	New Paradigms for Flexible Plants	Increasing Automation in Assembly
Impact on complexity of the entire process	Cost of material and energy	Quick product change with minimum delays	Less experienced workforce with high mix production	Replace manual 4D jobs
				

”Although 86% of companies plan to deploy advanced robots in their operations within the next three to five years, only 20% have created a holistic target picture and a comprehensive implementation roadmap.”

BCG Global Advanced Robotics Survey, January - February 2019

Simulation for Robots Performance

Covering a wide range of applications

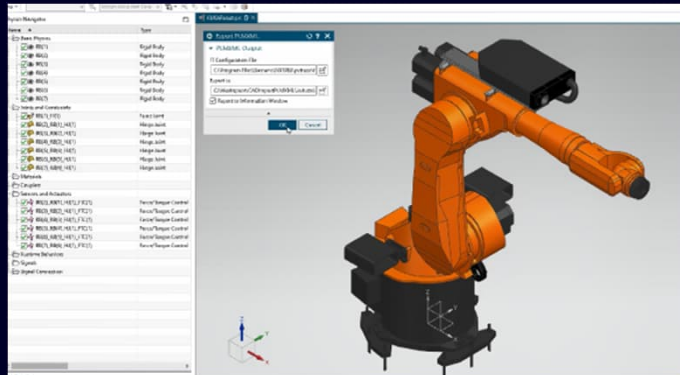

SIEMENS

From NX MCD to Simcenter Amesim workflow

From NX MCD to Simcenter Amesim workflow

MCD

Main Purpose

- Debug **machine kinematics** and validate **machine functioning**
- Motion of rigid bodies (it requires 3D data)
- **Easy animation** and virtual commissioning of machines
- SiL bundle SIMATIC Machine Simulator to include telegram simulation of drivers
- **Kinematics, collision check** and **material flow 3D**

Simcenter Amesim

Main Purpose

- Analyze and **optimize multiple KPIs** (cycle time, energy consumption, vibrations, motion accuracy...)
- **Optimize the PLC control parameters**
- **Multi-physics** (thermal, mechanics, electric and fluids) system simulation (mainly 1D, it requires component parameters but not necessarily CAD data)
- **Virtual multi-physic system integration** (machine or process) in a single 1D environment
- Possible 3D animations of physics using simulation results

Design challenges:

Optimal sizing of components to reach desired performances

Truly multiphysic simulation of the complete system (fluid, thermal, electrical, mechanical)

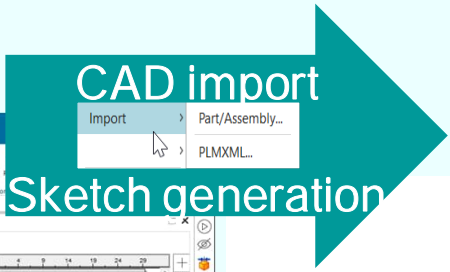

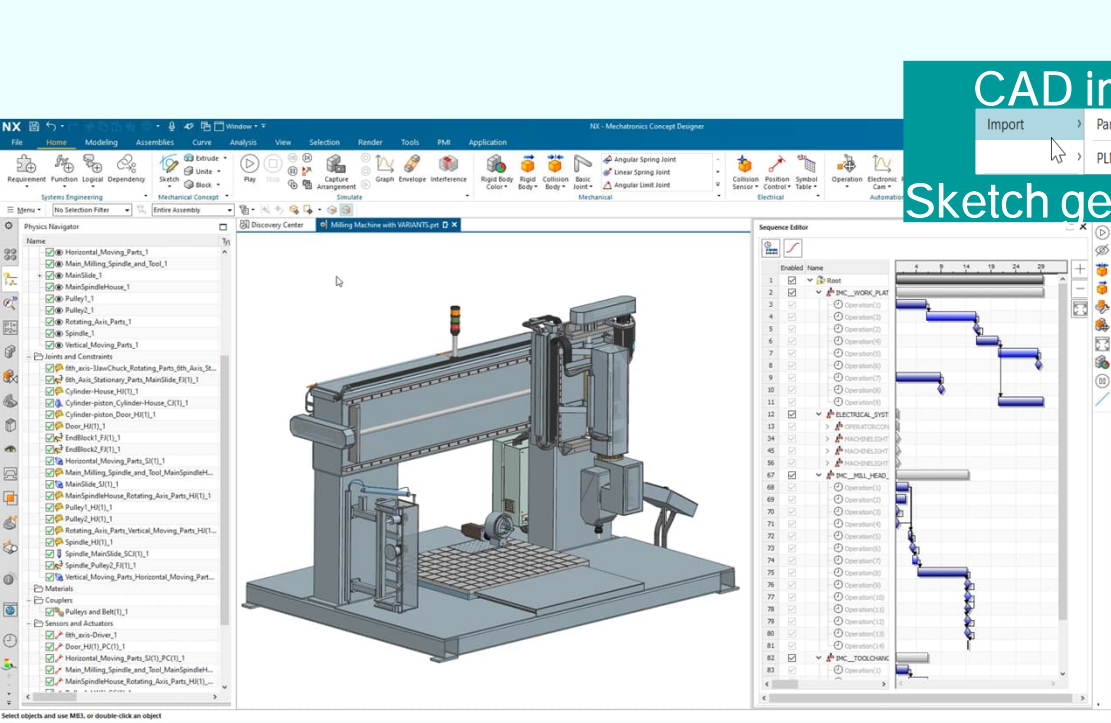

Trade-off between performance and energy consumption

Evaluate PLC code modification impact on performances

CNC machines

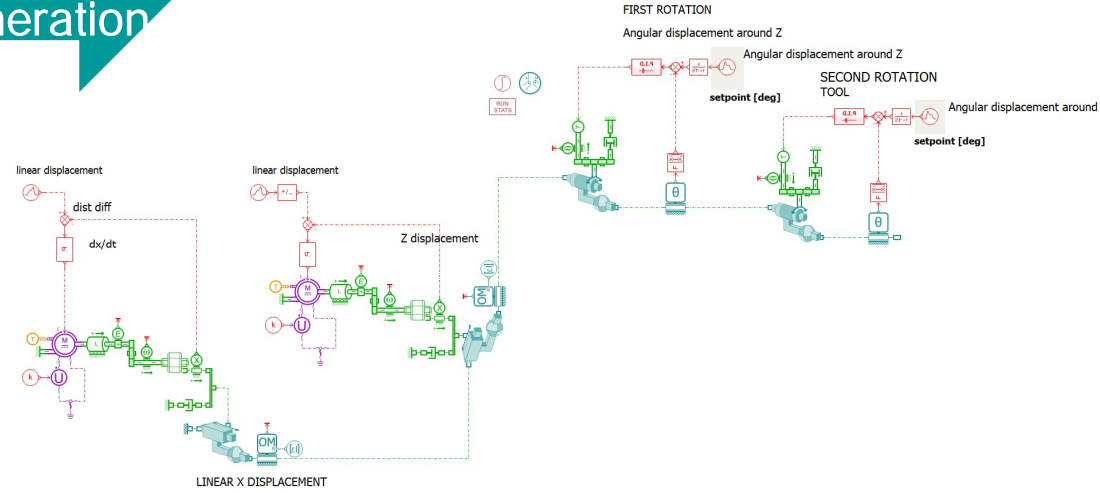

Main axis motion control and energy consumption

CAD import

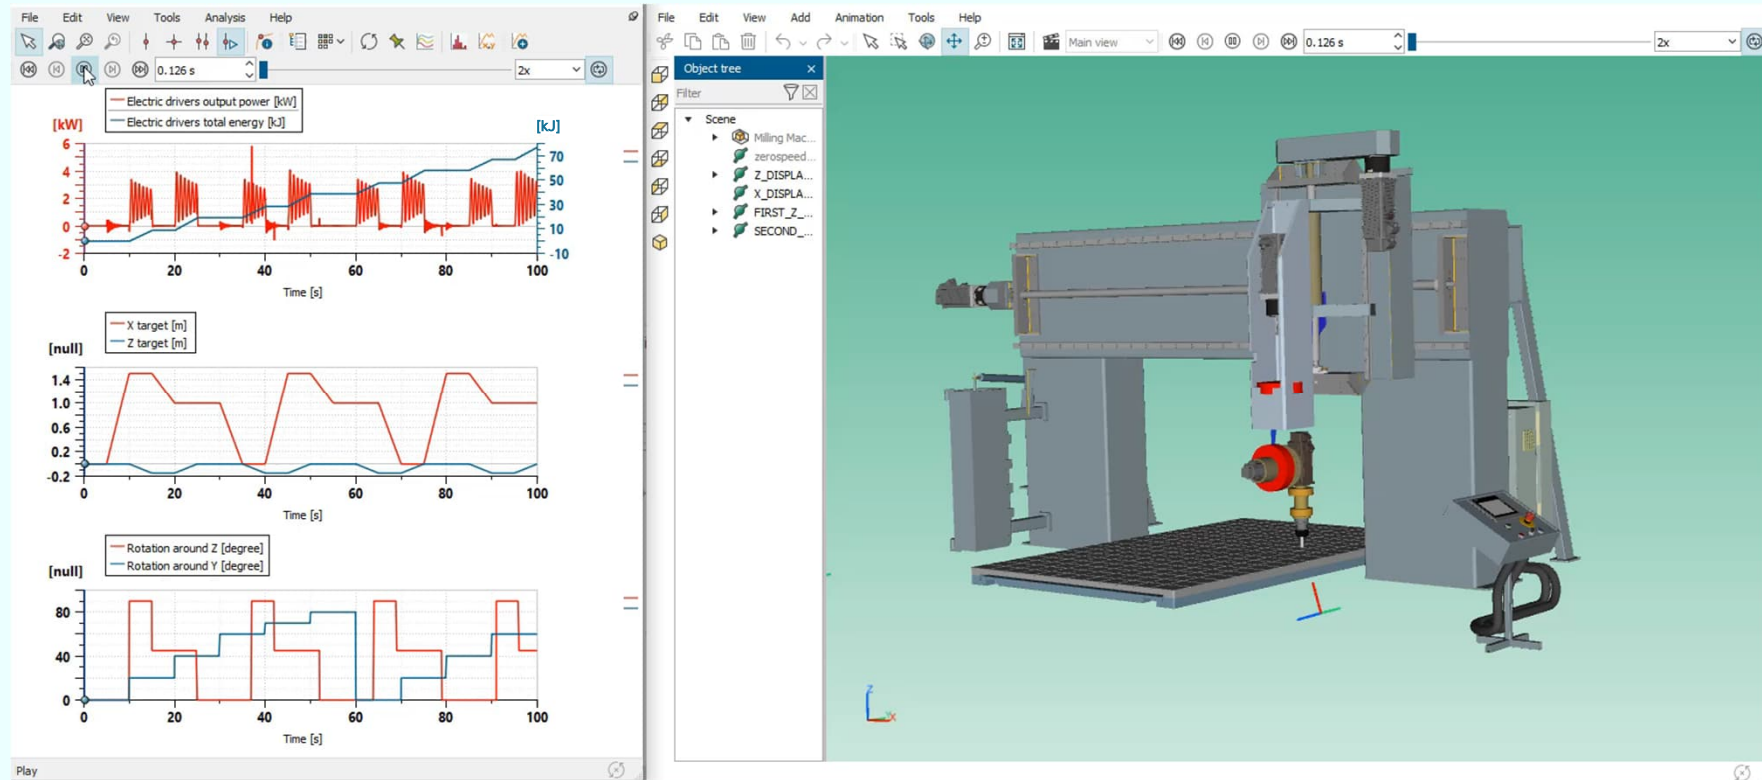

Import > Part/Assembly...
PLMXML...

Sketch generation

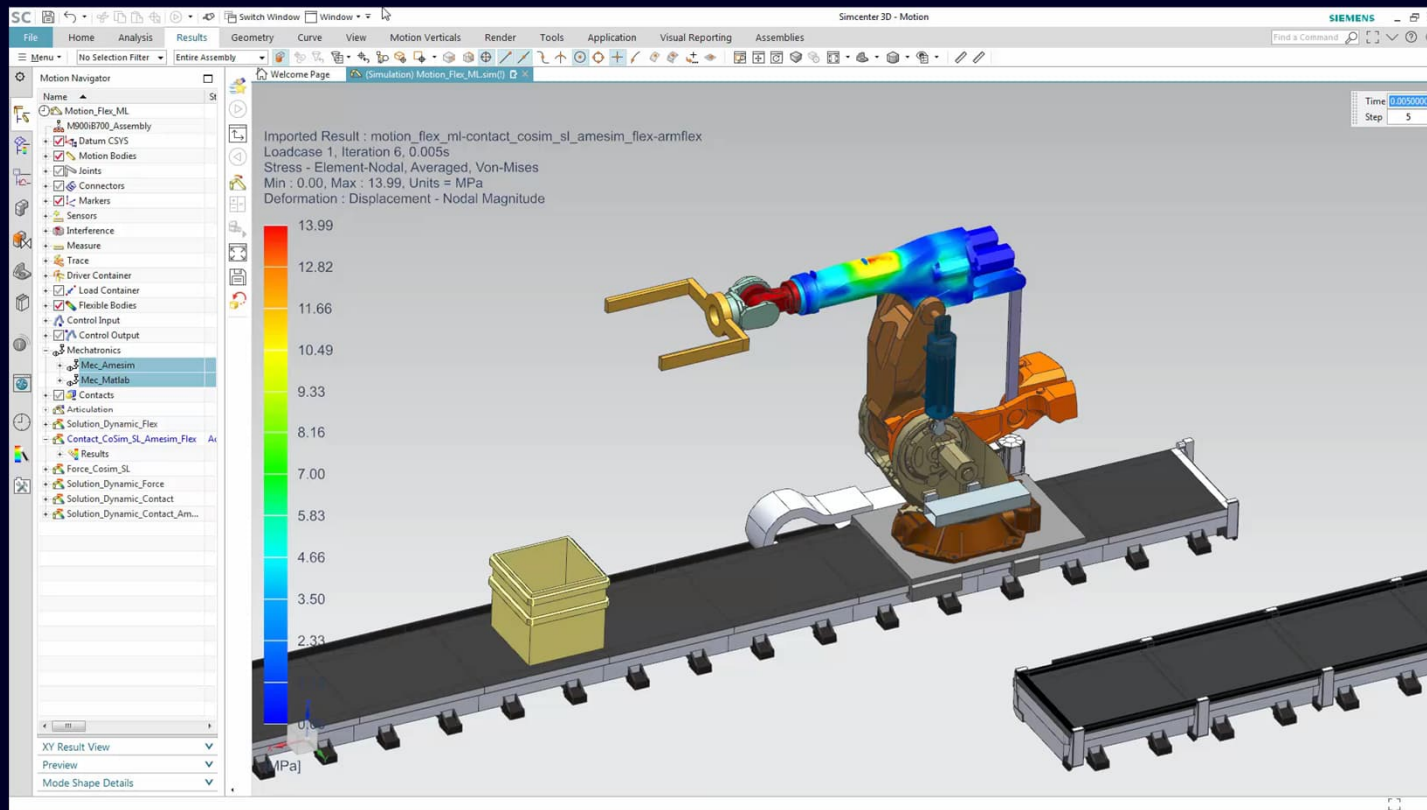

Main axis motion control and energy consumption

- Simcenter Amesim - CAD animation with simulation results -

High-fidelity models for MIL in SIL and HIL applications

Simcenter 3D Motion & Simcenter Amesim

Holistic simulation including Dynamics, Actuation and Controls

Co-simulate with Simcenter Amesim & Simcenter 3D Motion

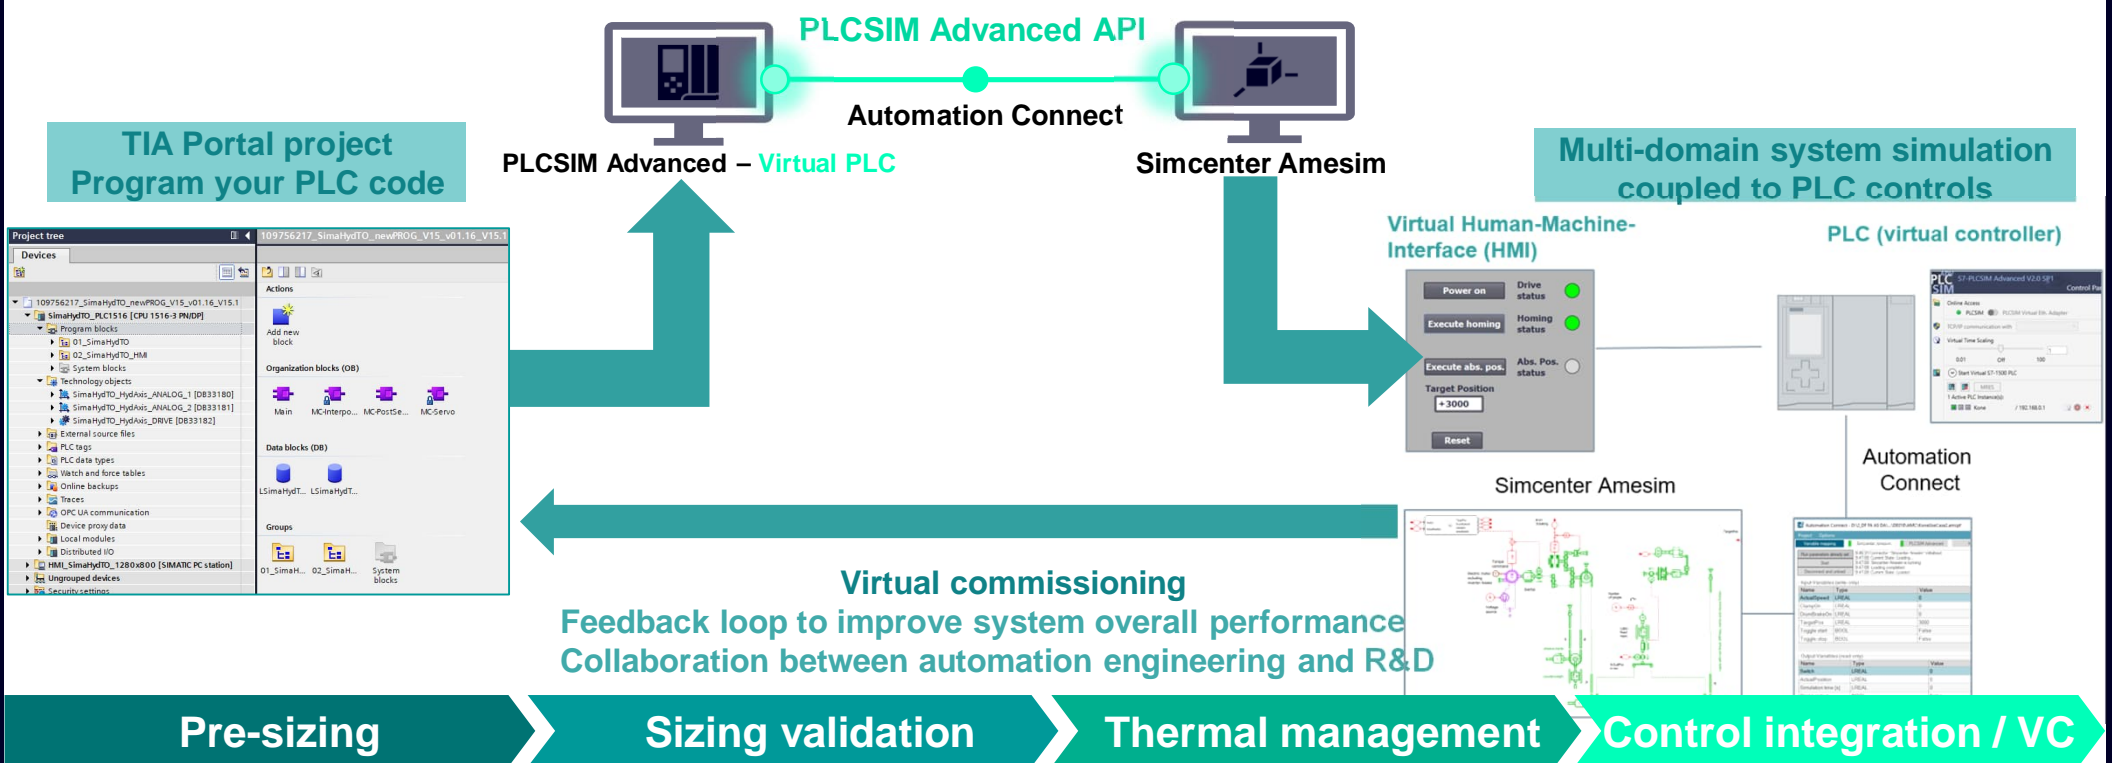

Exploit the systems potential by simulating the real behavior And assess risk

Virtual Commissioning

Validate electric drives control logics with **PLCs** in SiL/HiL

Objective: Simcenter Amesim connections to PLCs and electrical libraries with RT compatibility

Approach: Evaluate control accuracy, cycle times and acceleration/deceleration control profiles in SiL (virtual PLC) and HiL (real PLC) environments

Robotics: Joints and Electronic devices

Dust accumulation modeling

SIEMENS
Ingenuity for life

Challenge

- Preventing dust ingress and accumulation (Small and many particles)
- Important to see interaction with the walls.

Solution

- Simcenter STAR-CCM+

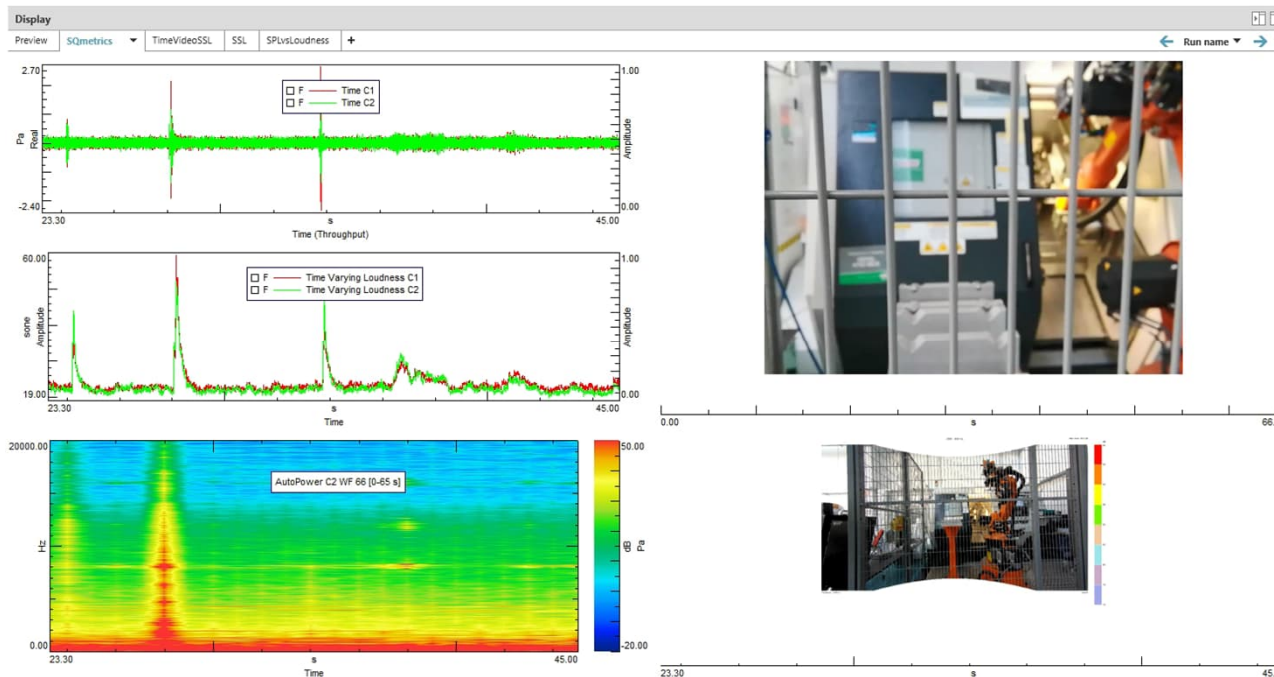

Benefit

- Run the background flow calculations.
- Set up the dust characteristics.
- Run the Lagrangian calculations.
- Possible body forces (Coulomb, van der Waals)

Dust accumulation in a factory environment is a challenge. Simcenter helps to select a design with the minimal accumulation.

Acoustic testing

Quickly locate noise sources

“Quickly locate the main noise sources, to check both in steady state and during transients if the mechanical system behave correctly.”

Challenge

- Identify the acoustic hotspots
- Avoid complaints
- Protect brand image

Solution

- Simcenter Testing Solutions for acoustic measurements and analysis

Benefit

- Relate the acquired signals with the mechanics involved to troubleshoot the machinery.
- Brand recognition
- Quieter environment and operator health

Acoustic simulation Enclosure design

SIEMENS
Ingenuity for life

Challenge

- Minimizing material costs
- Minimizing manufacturing costs
- Minimizing operational costs

Solution

- Simcenter 3D Acoustics
 - Design enclosure for the cell
 - Optimize workshop layout

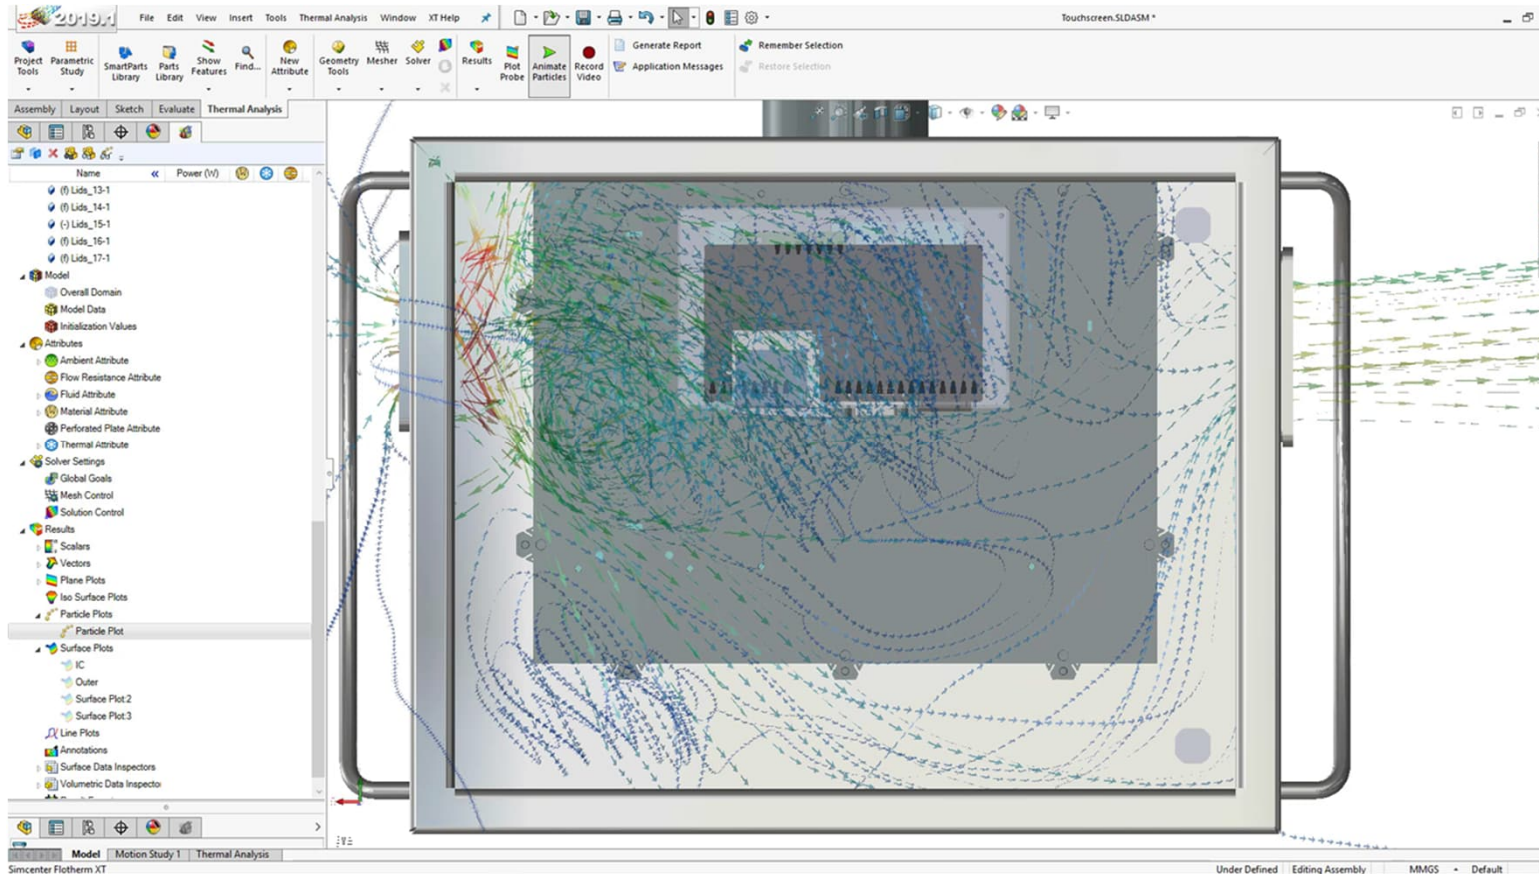

“Efficiently simulate the operation of a device based on either electromagnetic or pure electric fields.”

Benefit

- Realistic simulations for a variety of different applications, including layout definition
- Easy to operate: from CAD to Acoustics
- Get results fast: superior and unique solving technologies

Thermal design Electronics - Control panel

SIEMENS
Ingenuity for life

Challenge

- Limit overtemperatures condition to avoid downtime.

Solution

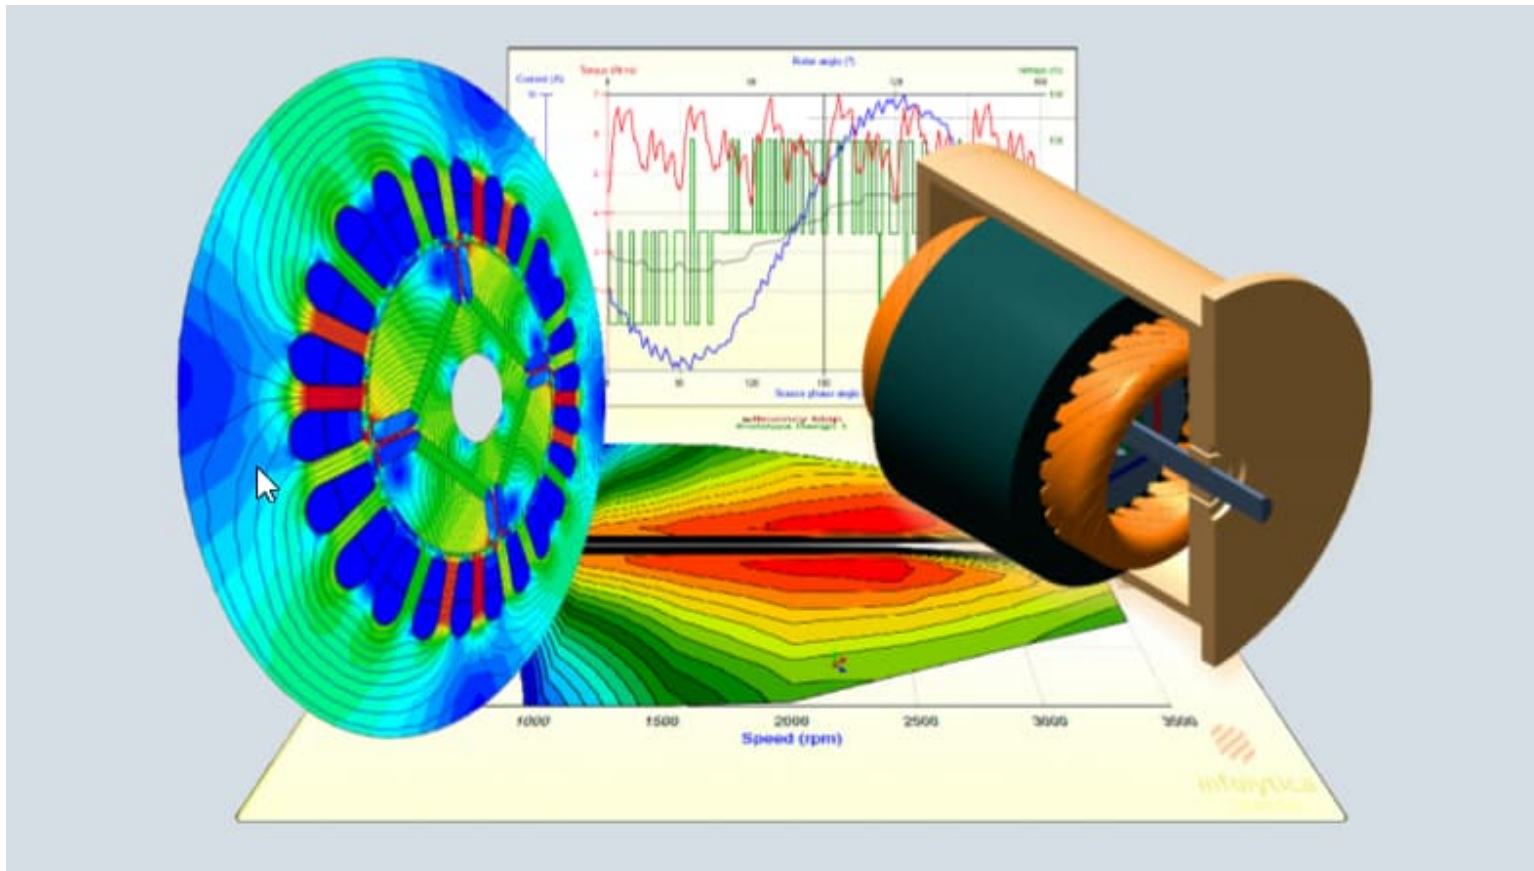

- Simcenter Flotherm

Benefit

- Ensure the required flowrate for the convection to cool the device,

Thermal design Servomotor

SIEMENS
Ingenuity for life

Challenge

- Limit overtemperatures condition to avoid downtime.

Solution

- Simcenter E-machine design

Benefit

- Combine electromagnetic and thermal analysis early in the design.

Electric Cables and Wire Harness Design

Faster and safer process

SIEMENS
Ingenuity for life

Challenge

- Design safer and faster, right at first try, preventing product recalls
- Reduce the iterations between product and manufacturing process designer

Solution

- **Simcenter Flexible Pipe:** Fast preview/ Instantaneous update, NX Routing link/bundle mounting, Permanent deformation, Complex harness: dynamics, Flat Electric Cables: contact, Plastification during cyclic movements

Predicting, analyzing, improving positions, movements, stresses using an accurate and robust 3D simulation approach.

Benefit

- Reduce production and aftersales costs
- Less iterations → focus on innovation
- Avoid mounting problems

Printing plate production machine

Simcenter SCADAS XS – Reduce time/cost for global servicing

SIEMENS
Ingenuity for life

Challenge

- How to avoid costly engineer travel time for simple troubleshooting task
- Need for mobile measurement equipment

Solution

- Application = local vibration troubleshooting by an operator, engineer stays @ HQ
- Product = Simcenter SCADAS XS with tablet and predefined test template

Benefit

- Simcenter SCADAS XS is shipped
- Operator can do the test
- Engineer only analyzes the data

Thanks to the Simcenter SCADAS XS, a typical intervention went from 1 week down to only 2 days.

Simcenter for Robots Performance

Covering a wide range of applications

Controls

Meet standards & compliance faster

Guaranteed end-to-end traceability

Speed up development, innovation and time to market

SIEMENS
Ingenuity for life

SIEMENS
Ingenuity for life

Electromagnetic modeling

Capture realism through rich set of capabilities

SIEMENS
Ingenuity for life

Challenge

- Multi-discipline analysis of an actuator
- Efficiency & loss prediction

Solution

- Simcenter 3D Low Frequency EM

“Efficiently simulate the operation of a device based on either electromagnetic or pure electric fields.”

Benefit

- High Fidelity loss and performance simulation
- Rich material database
- Account for any number of moving components (linear motors, magnetic gears)

Electromagnetic modeling

Maximize connectivity – Reduce downtime

SIEMENS
Ingenuity for life

Challenge

- Maximize performance of connectivity devices; from component (design of antenna's) to full factory layout for connectivity, ...).

Solution

- Simcenter 3D High Frequency EM

Benefit

- Efficiently simulate and address the compatibility and interference (EMC/EMI) concerns of electrical and electronic systems.

“The evolution to Industry 4.0 requires assuring compatibility among the plant equipment and IIoT sensors/actuators.”

Electromagnetic modeling

EMC/EMI issues in Industry 4.0

SIEMENS
Ingenuity for life

Challenge

- An industrial production environment is typically noisy from Electromagnetic due to abundant presence of electric machines, high voltage cables, power electronics, ...

Solution

- Simcenter 3D High Frequency EM

Benefit

- Presence of sensors and IoT equipment must not interfere with the harsh EM environment

“Legacy industrial environment could be not properly designed to install them!”

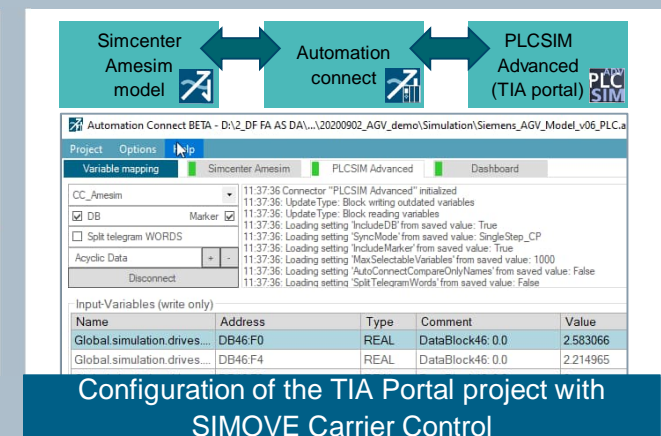

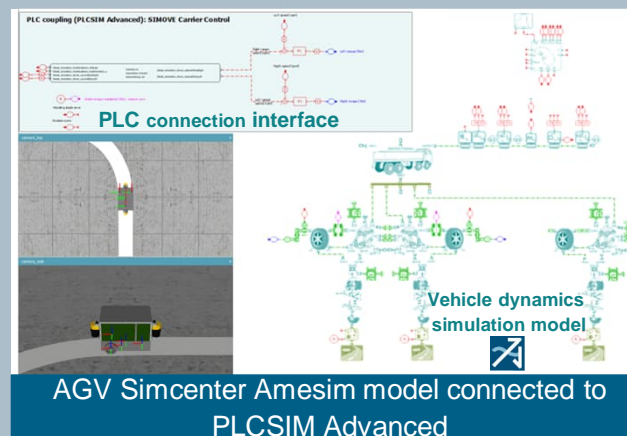

Siemens SIMOVE AGV system platform

Concurrent engineering & virtual commissioning

- Achieve higher quality: AGVs design and multiphasic system integration with different scenarios as trajectory shape, vehicle loads and height
- Speed-up engineering with automation standards and virtual validation
- Increase the know-how in a risk-free environment
- AGVs monitoring to reduce down-times and issues

Virtual commissioning environment – Software-in-the-Loop

- Simcenter Amesim simulation model of the full vehicle (chassis, electric and trajectory definition) with the interface to Automation Connect
- TIA Portal with PLCSIM Advanced with the logic of the SIMOVE Carrier Control (PLC)
- Configuration of Virtual Commissioning project in Automation Connect (interface to map and exchange variables)

Process Simulate

General

- Kinematics & Geometry
- Layout / Reachability / Collision analysis
- Sequence of Operation Simulation
- Documentation, e.g. Images / Movies / Reports

Robotics

- Joining, coating, treating or handling processes
- Manual & automatic Trajectory planning
- Offline programming & path optimization
- Exact cycle-time calculation - RCS & VRC

VC

- Coupling to PLC (HiL&SiL) / SIMIT / WinMOD
- Supports complex device behavior, like AGVs
- Behavior modelling using LB / SCL / FMU / API
- Material-lifecycle / Grip & Release / Sensors

Human

- Semi-automatic wizard-based task modelling
- Motion Capturing - Extensive device support
- Ergonomic analysis & Timing & Reporting
- Integrating Virtual Reality & Physics

Address insights to your plant with Insight Hub

IIoT as a service: Insight Hub

Centralized compute and storage,
with solutions, apps and services

SIEMENS

Address insights to your plant with Insight Hub

Insights Hub는 Siemens의 Low-code platform, Edge computing, Field/control 기능과 연계하여 더욱 포괄적인 IIoT를 제공합니다.

Low-code platform

Build apps faster for cloud, on-premise or hybrid infrastructure

IIoT as a service

Centralized compute and storage, with solutions, apps and services

Edge computing

Decentral compute and storage with device runtime, apps and management

Field/control

Automation runtime and engineering connectivity

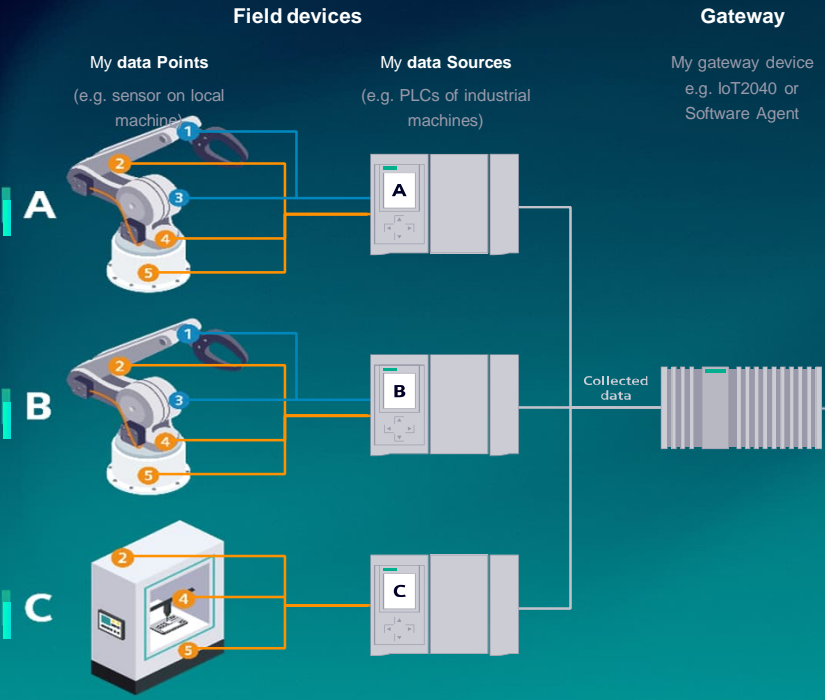

SIEMENS

Insights Hub Connectivity

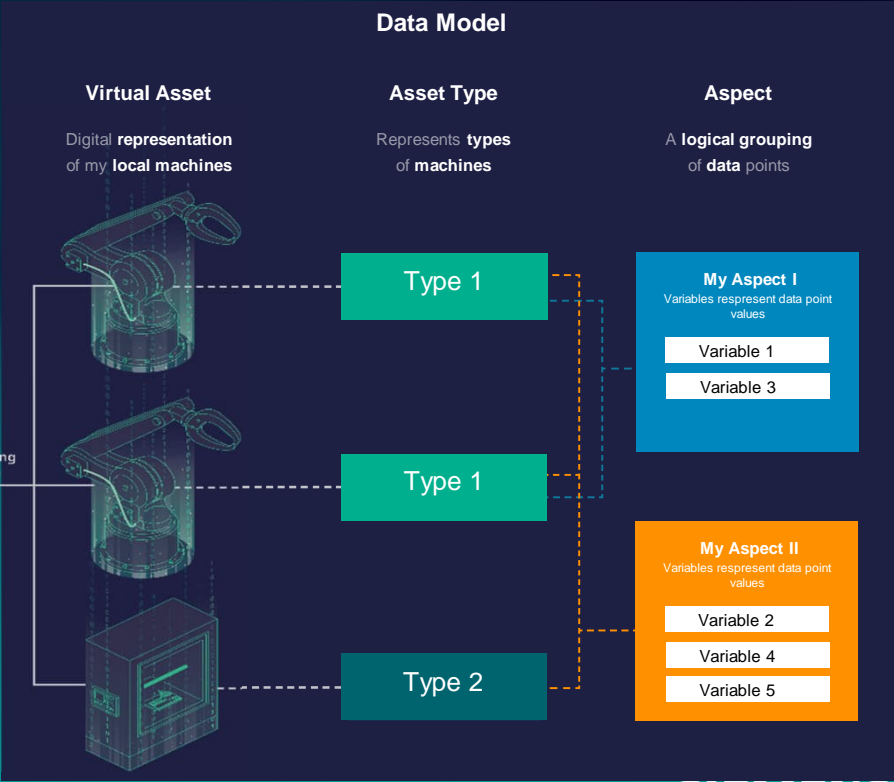

My site and my things

Digital representation of gateway: The Agent Asset

Asset representing local gateway. It receives all data that you can map to the data model

Insights Hub

Address insights to your plant with Insight Hub

Siemens가 제공하는 주요 Application들을 통해 설비 가시성 확보, 설비 효율 극대화, 예측 유지보수, 제품 품질 개선, 자재 물류 최적화, 지속가능성 개선 등을 달성할 수 있습니다.

1 Insights Hub Monitor

설비 가시성 확보

실시간으로 설비 및 라인의 성능을 모니터링하여 상황에 맞는 데이터를 활용 및 분석하여 통찰력 확보

2 Insights Hub OEE

설비 효율 극대화

설비 및 라인의 효율성을 산출 및 분석하여 생산 가시성 개선 및 생산성 손실 방지

3 Insights Hub Asset Health & Maintenance

예측 유지보수

유지보수 프로세스의 효율성을 개선하여 유지보수 비용을 절감하고 이상 징후를 신속하게 감지 및 대응

4 Insights Hub Quality Prediction

제품 품질 개선

기계 및 프로세스 데이터를 수집한 후 AI 모델에 입력하여 품질을 예측하고 결함 가능성 원인 파악

5 Intralogistics

자재 물류 최적화

내부 물류 프로세스를 최적화하고, 자재 채널 상태를 모니터링하며, 자재 관련 다운타임 감소

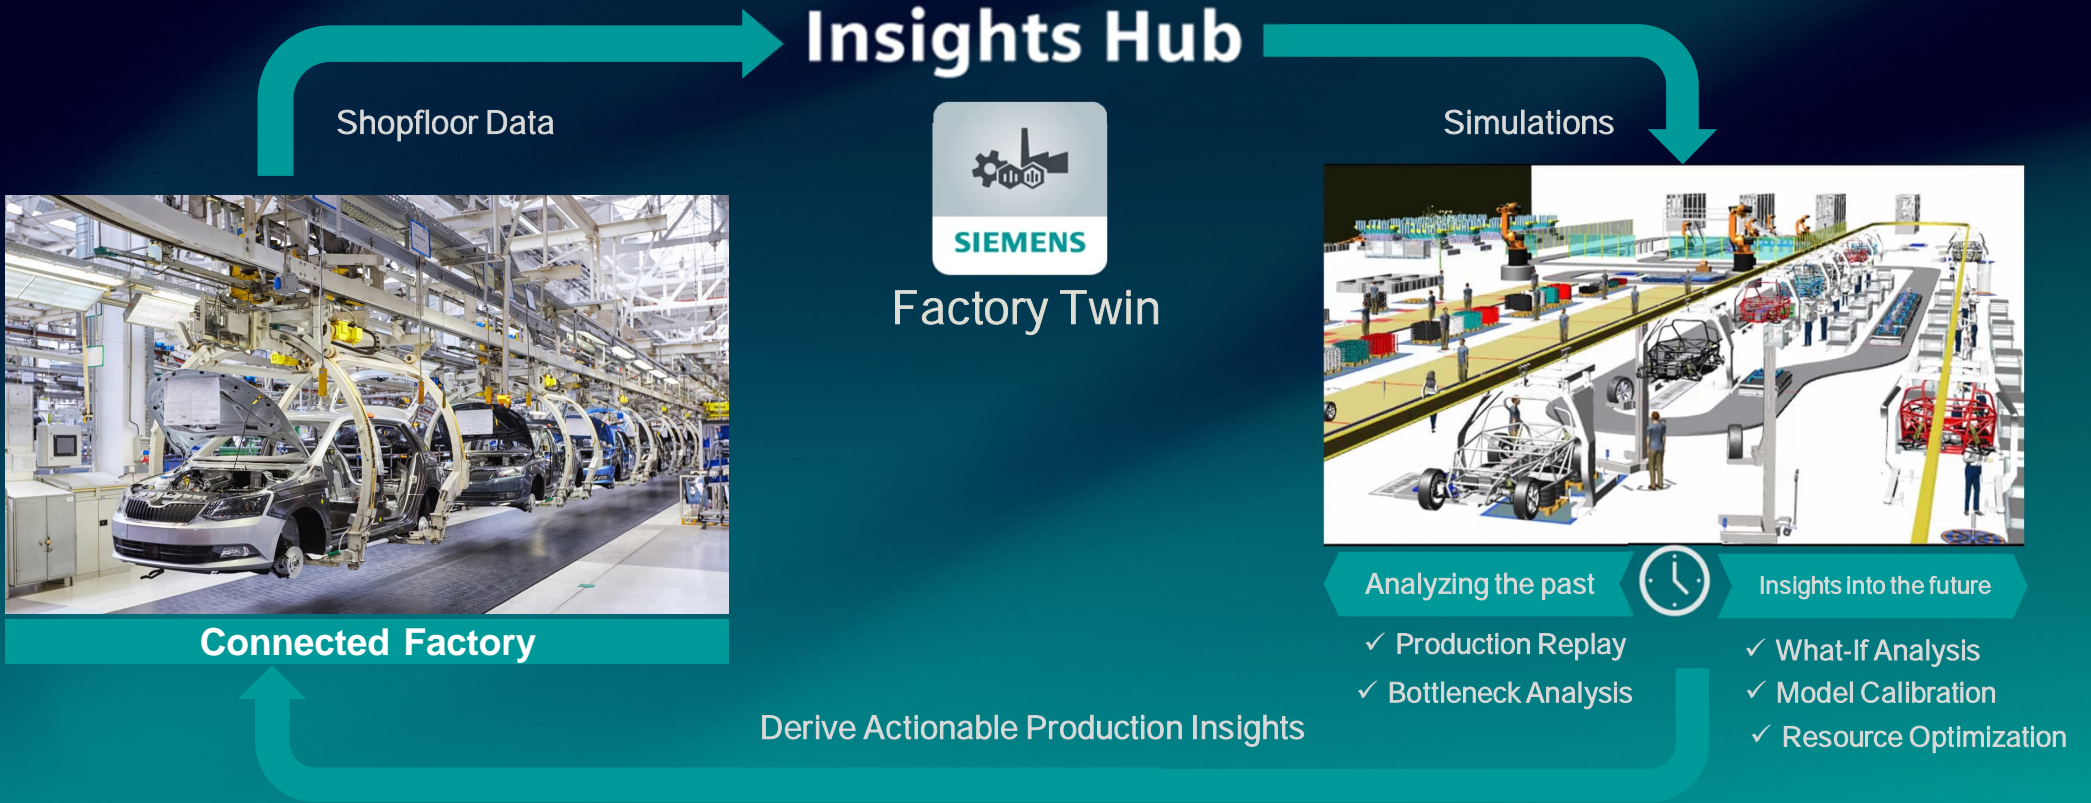

6 SIMATIC Energy Management & Optimization

지속가능성 개선

에너지 사용량을 절감하여 지속 가능성에 대한 요구를 달성
